Data-Base Individualization

Establish that there is a Tier 2 validated instructional platform in place

Data-Base Individualization

Establish that there is a Tier 2 validated instructional platform in place

Progress monitor:

- Establish a present level of performance
- Set an ambitious long-term goal
- Collect frequent assessment data
- Use decision rules

Data-Base Individualization

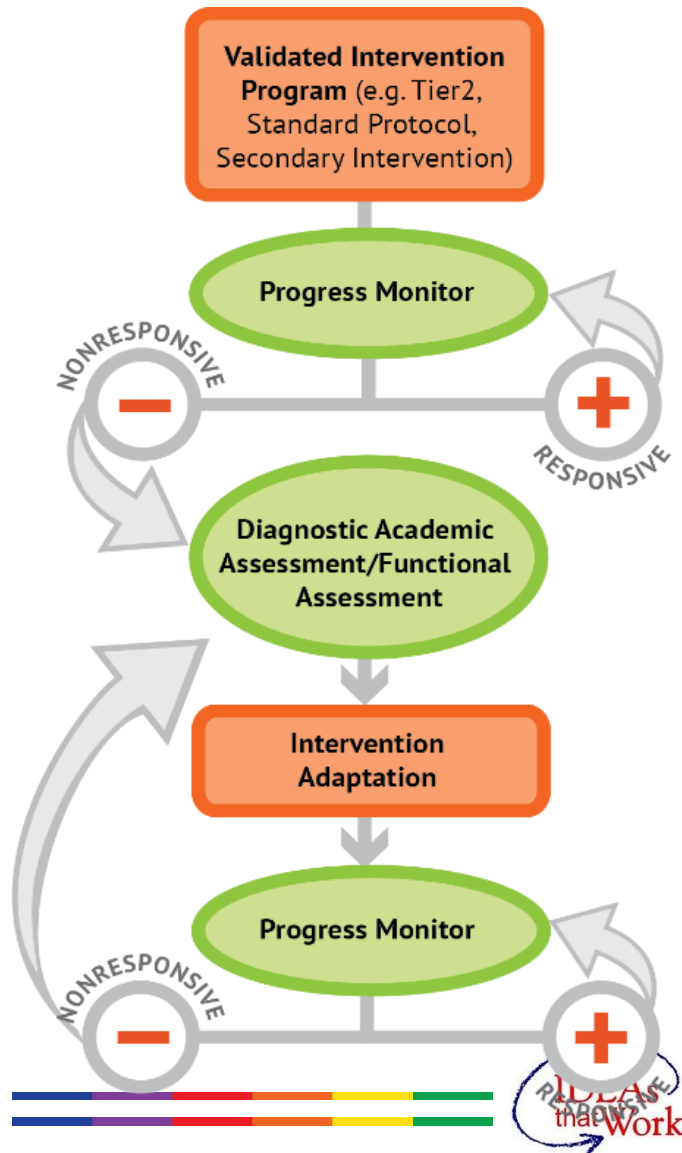

Establish that there is a Tier 2 validated instructional platform in place

Progress monitor:

- Establish a present level of performance
- Set an ambitious long-term goal
- Collect frequent assessment data
- Use decision rules

Based on student response:

- Continue the Tier 2 program with progress monitoring OR
- Collect diagnostic data

Data-Base Individualization

Establish that there is a Tier 2 validated instructional platform in place

Instruction

Fluency Practice

Effective Mathematics Instruction

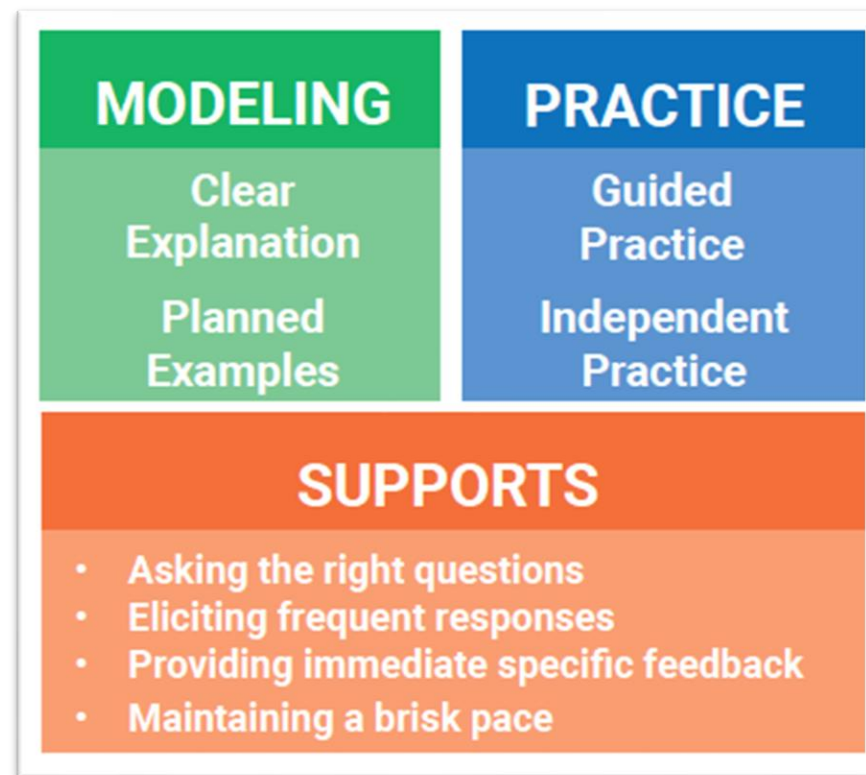

Explicit Instruction

Modeling

Practice

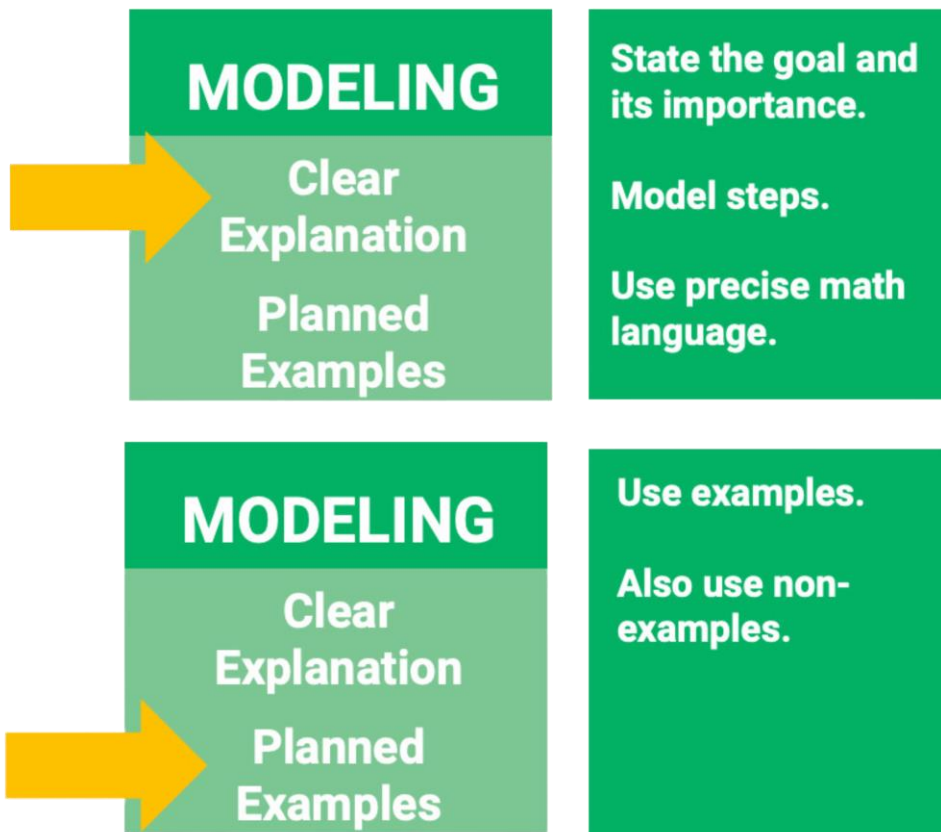

supports

Teachers should be explicit in the modeling and practicing of math.

Effective Mathematics Instruction

Explicit Instruction

$$24 / 6$$

$$28 \div 7$$

$$35\sqrt{5}$$

$$32 \div 8$$

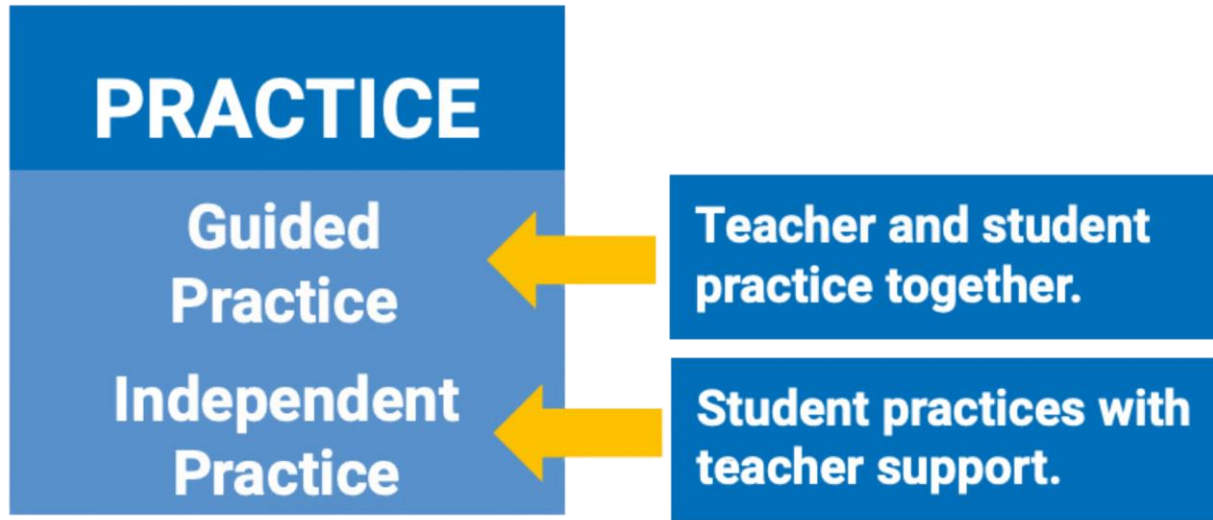

$$42 \div 7$$

$$25 - 5$$

Effective Mathematics Instruction

Explicit Instruction

Effective Mathematics Instruction

Explicit Instruction

SUPPORTS

Asking the right
questions

Eliciting frequent
responses

Providing
immediate
specific feedback

Maintaining a
brisk pace

Effective Mathematics Instruction

Explicit Instruction

SUPPORTS

Asking the right questions

Ask low-level and high-level questions.

Eliciting frequent responses

Providing immediate specific feedback

Maintaining a brisk pace

Effective Mathematics Instruction

Explicit Instruction

SUPPORTS

Asking the right questions

Ask low-level and high-level questions.

Eliciting frequent responses

Vary responses, such as: classwide, individual, partner, write on paper, write on whiteboard, thumbs up, etc.

Providing immediate specific feedback

Maintaining a brisk pace

Effective Mathematics Instruction

Explicit Instruction

SUPPORTS

Asking the right questions

Ask low-level and high-level questions.

Eliciting frequent responses

Vary responses, such as: classwide, individual, partner, write on paper, write on whiteboard, thumbs up, etc.

Providing immediate specific feedback

Provide affirmative and correct feedback.

Maintaining a brisk pace

Effective Mathematics Instruction

Explicit Instruction

SUPPORTS

Asking the right questions

Ask low-level and high-level questions.

Eliciting frequent responses

Vary responses, such as: classwide, individual, partner, write on paper, write on whiteboard, thumbs up, etc.

Providing immediate specific feedback

Provide affirmative and correct feedback.

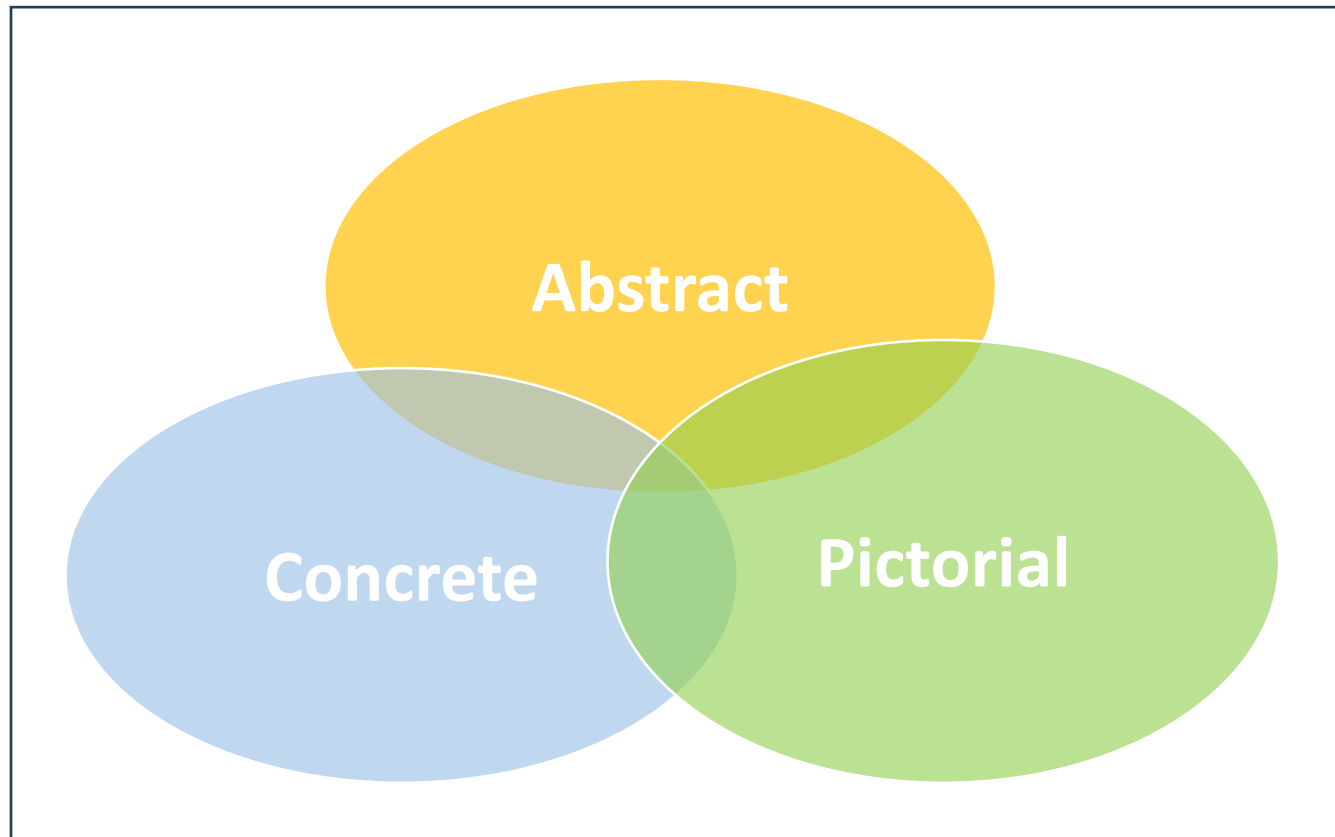

Maintaining a brisk pace

Be planned and organized.

"Grab your bag of manipulatives as you enter the classroom."

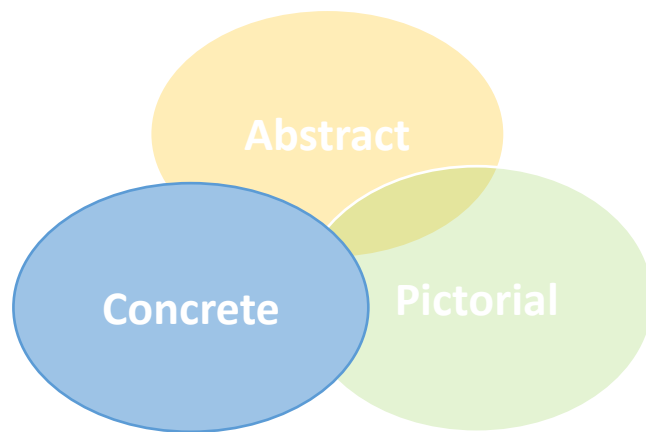

Effective Mathematics Instruction

Teachers should use multiple representations to help students understand different math concepts and procedures.

Effective Mathematics Instruction

Concrete representations

Operations	Whole Numbers	Fractions	Algebra	Geometry

Effective Mathematics Instruction

Pictorial representations

Operations	Whole Numbers	Fractions	Algebra	Geometry

Effective Mathematics Instruction

Abstract representations

$$4 + 9 = 13$$
$$78 = 7 \text{ tens and } 8$$
$$x - 6 = 9$$
$$\begin{array}{r} 4,156 \\ + 789 \\ \hline \end{array}$$

Effective Mathematics Instruction

Teachers should be sure to use precise and concise math language.

<p>Definition When a shape is flipped across Line of reflection</p>	<p>Illustration</p>
<p>Example</p>	<p>Non-example</p>

Reflection

Add: to put two amounts together
Plus sign: add
Equal sign: the same as

$$\begin{array}{r} 4 \\ + 1 \\ \hline 5 \end{array}$$

numerator
 The term in a fraction that tells how many parts of a fraction.

$\frac{2}{3}$ $\frac{2}{3}$ In these fractions, 2 is the numerator.

ones
 The digit representing 1.
 In the number 4.23, 4 is in the ones place.

Effective Mathematics Instruction

<p>Coefficient Constant Term Variable</p> <p>term term term</p> <p>$2x^2 + x - 3$</p> <p>coefficient variable variable constant</p> <p>A</p>	<p>Integers Irrational numbers Natural numbers Rational numbers Whole numbers</p> <p>irrational</p> <p>rational integers whole natural</p> <p>B</p>

Powell, Stevens, & Hughes (2019)

Effective Mathematics Instruction

EXAMPLES: MNEMONICS

RIDE

Read the problem.
Identify the relevant information.
Determine the operation and unit for the answer.
Enter the correct numbers and calculate, then check the answer.

UPS CHECK

Understand: Read the problem.
Plan: Choose a strategy.
Solve: Show all your work.
Check: Explain & justify your answer.

SOLVE

Study the problem.
Organize the facts.
Line up the plan.
Verify the plan with computation.
Examine the answer.

RIDGES

Read the problem.
I know statement.
Draw a picture.
Goal statement.
Equation development.
Solve the equation.

ADDITIONAL RESOURCES

[IRIS Center Modules](#)

[LD Online Resources](#)

RICE

Read and Record the problem.
Illustrate your thinking.
Compute.
Explain your thinking.

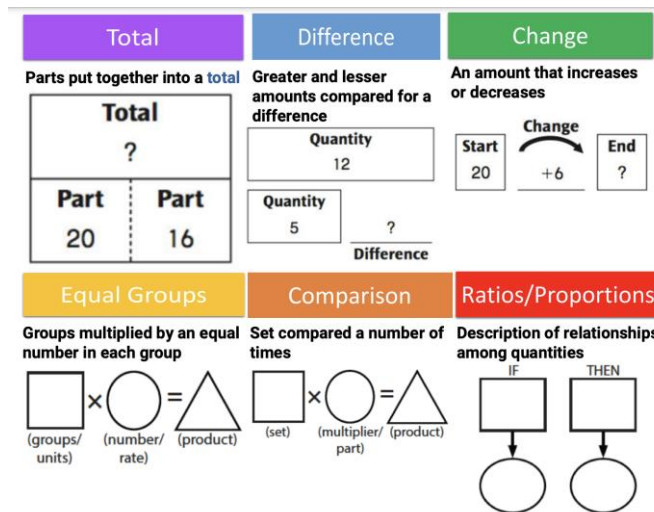

Effective Mathematics Instruction

Matt bought 1 orange and 3 apples for a total of \$2.25. The orange cost \$0.60. The apples each cost the same amount. What amount did Matt pay to buy each apple?

$$\begin{array}{l} \text{U} \\ \text{P} \\ \text{S} \\ \checkmark \end{array} \quad \begin{array}{l} P_1 + P_2 = T \\ 0.60 + ? = 2.25 \\ ? = \$1.65 \text{ for} \\ \text{apples} \end{array} \quad \left| \quad \begin{array}{l} G \times N = P \\ 3 \times ? = 1.65 \\ ? = \$0.55 \\ \text{per apple} \end{array}$$

Effective Mathematics Instruction

EXAMPLE: SCHEMAS

Total

Max baked 40 cookies and 75 brownies. How many baked goods did Max bake?

Difference

The Brazos River is 840 miles. The Red River is 1,360 miles. How much longer is the Red River?

Change

There were 23 passengers on the bus. Then, 13 more passengers boarded the bus. How many passengers are on the bus now?

Equal Groups

Mark has 2 boxes of crayons. There are 24 crayons in each box. How many crayons does Mark have?

Comparison

Jill picked 6 apples. Meg picked 2 times as many apples as Jill. How many apples did Meg pick?

Ratios/Proportions

There are 176 slices of bread in 8 loaves. If there are the same number of slices in each loaf, how many slides of bread are in 5 loaves?

Effective Mathematics Instruction

EXAMPLES: GRAPHIC ORGANIZERS

Define:	Characteristics:
<div style="border: 1px solid black; width: 150px; height: 30px; margin: 0 auto;"></div>	
Example:	Non-example:

Effective Mathematics Instruction

Example: Fluency Practice

Fluency building activities provide opportunities for students to master math facts and other necessary math knowledge.

When students are fluent in math facts, they can spend more energy solving problems or tackling

Adapting Instruction

Adapting Instruction

2023 OSEP LEADERSHIP AND PROJECT DIRECTORS' CONFERENCE

Adapting Instruction

Validated Instructional Platform (e.g., Tier 2 Standard Protocol, Secondary Intervention)

Progress Monitoring

CORE PD

Diagnostic Academic Assessment (Pretest)

Progress Monitoring

Instructional Adaptation

Diagnostic Academic Assessment (Posttest)

As a result of work

STAIR Coaching

2023 OSEP LEADERSHIP AND PROJECT DIRECTORS' CONFERENCE

How can we adapt instruction to meet the diverse needs of all learners?

instructional adaptations.

Adapting Instruction

WHOLE-CLASS ADAPTATIONS

PROVIDE WORKED EXAMPLES

"Talk through this problem with me."
"Which is correct and why?"

$$\begin{array}{r} 405 \\ + 16 \\ \hline 411 \end{array} \qquad \begin{array}{r} 405 \\ + 16 \\ \hline 421 \end{array}$$

ENGAGE STUDENTS IN DISCOURSE

"Tell me how you solved this problem."
"What were you thinking about when you regrouped?"
"How would you teach this problem to another student?"
"Describe the word problem in 10 words or less."

TEACH PROBLEM-SOLVING STRATEGIES

- 1 Don't tie key words to operations
- 2 Have an attack strategy
- 3 Teach word-problem schemas

Adapting Instruction

WHOLE-CLASS ADAPTATIONS

WHOLE-CLASS ADAPTATIONS

USE MULTIPLE REPRESENTATIONS

Hands-on manipulatives or tools

Virtual manipulatives, drawings, or graphic organizers.

Math with the numbers, symbols, and words of math.

TEACH ALTERNATE ALGORITHMS

$$\begin{array}{r} 34 \\ \times 27 \\ \hline 238 \\ + 680 \\ \hline 918 \end{array}$$

$$\begin{array}{r} 34 \\ \times 27 \\ \hline 210 \\ + 28 \\ \hline 918 \end{array}$$

	30	4
20	600	80
7	210	28

PRACTICE FACT FLUENCY

CHUNK PROBLEMS INTO SMALLER STEPS

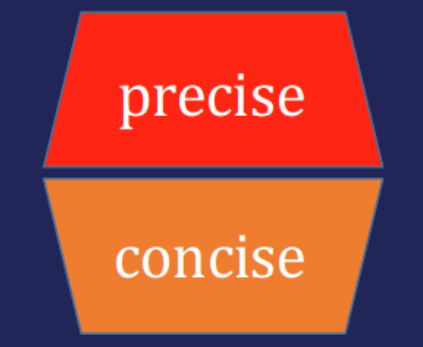

Break larger problems into smaller tasks, or chunks, for students to manage. For example, to solve a word problem, break the process into several steps.

C. Mila counted cars on her walk home from school. Here is Mila's graph.

Color	Count
Grey	25
Blue	20
Black	15
White	15
Red	5

How many white and grey cars did Mila see?

USE APPROPRIATE MATH LANGUAGE

TEACH MATH VOCABULARY

Define
When a shape is flipped across a line of reflection.

Examples

Adapting Instruction

Resources:

Ideas in Mathematics: Geometric Measurement

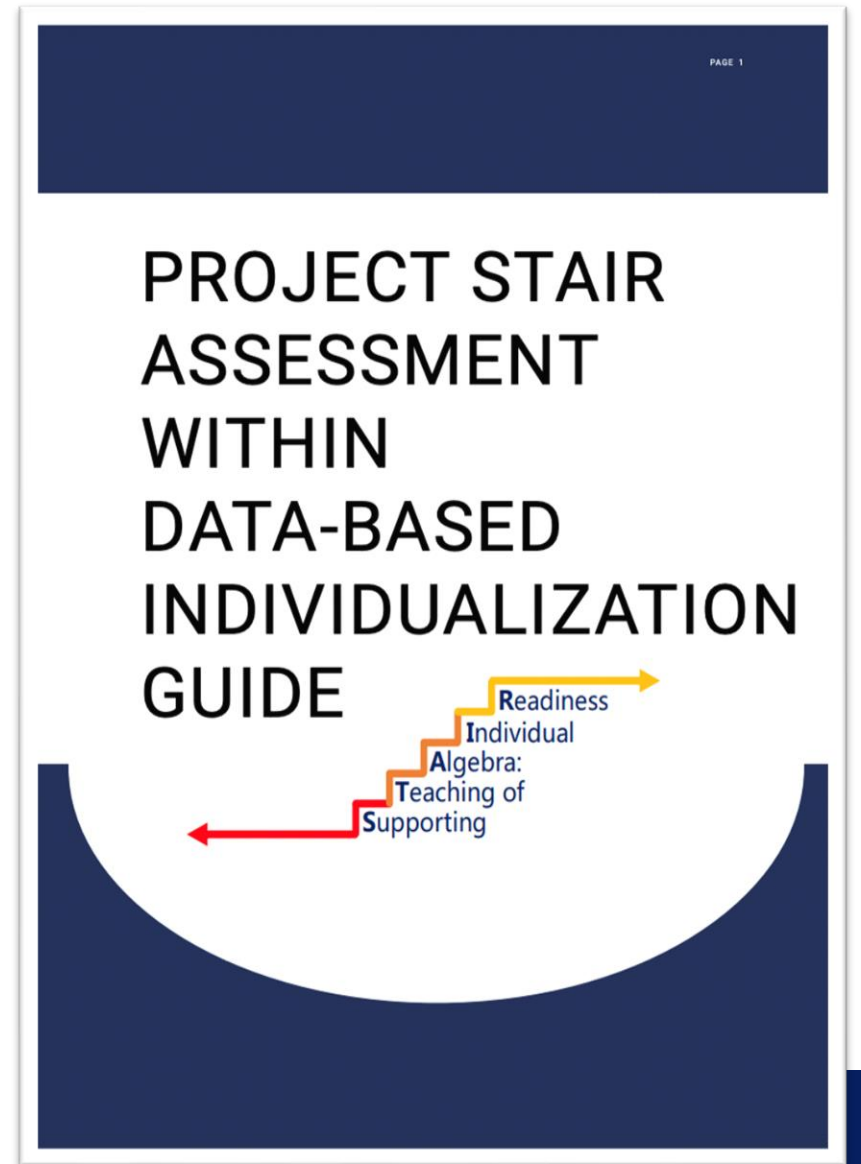

Misconception	Explanation	Example
Confusing linear and square units	One major misconception students have with area measurement is thinking about area as the length of two lines, rather than the measure of a surface	<i>"How would you determine the areas of these shapes?"</i>
Difficulty in conceptualizing the meaning of height and base	Students tend to confuse a slanted side and the height. Any side of the figure can be considered the base and for each base there is a corresponding height. The confusion may be because students have a lot of early experiences with the $L \times W$ formula (where the height is the same as the length)	

Activity	Explanation	Example
Area of a Parallelogram Activity	Give students a grid with parallelograms or draw on plain paper with the lengths of all four sides and the height. Ask students to use what they have learned about the area of rectangles to determine the areas of these parallelograms. Students should find a method that will work for any parallelogram.
